# Introduction

### Introduction

This serves as a technical overview of the backend, with requests and all models. Where possible we provide examples on how the payload could look like.

# **Web Service**

This part of the documentation deals with the different API-Endpoints. Examples to fields are put into the models section to increase readability. Every request lists all possible status codes and the reason for the status code.

/v1/

get /v1/

hello

#### Responses

200 Success

Туре	
string	

### /v1/exposed

post /v1/exposed

Enpoint used to publish the SecretKey.

#### Request Headers

Field	Туре	Description
User-Agent *	string	App Identifier (PackageName/BundleIdentifier) + App-Version + OS (Android/iOS) + OS-Version

#### Response Body

Field	Туре	Description
*	ExposeeRequest	The ExposeeRequest contains the SecretKey from the guessed infection date, the infection date itself, and some authentication data to verify the test result

#### Responses

200 Success

#### Returns OK if successful

Туре	
string	

#### 400 Bad Request

Multiple possible errors:

- Key is not base64
- No AuthData given

## /v1/exposed/dayDateStr

get /v1/exposed/{dayDateStr}

#### Path Parameters

Field	Туре	Description
dayDateStr *	teStr * string The date for which we want to get the SecretKey.	

#### Responses

200 Success

Returns ExposedOverview, which includes all secretkeys which were published on dayDateStr.

Туре	
ExposedOverview	

500 Internal Server Error

If the date time string is not parseable.

# **Models**

All Models, which are used by the Enpoints are described here. For every field we give examples, to give an overview of what the backend expects.

#### AuthDataMethod

- NONE
- REDEEM\_CODE

#### **ExposedOverview**

Field	Туре	Description	Example
exposed	Exposee[]	A list of all SecretKeys	

## Exposee

Field	Туре	Description	Example
ld	integer		
key *	string	The SecretKey of a exposed.	AAAA

## ${\sf Exposee Auth Data}$

Field	Туре	Description	Example
value	string	Authentication data used to verify the test result	
method	AuthDataMethod	Specify the method, which should be used to verify data	

# ExposeeRequest

Field	Туре	Description	Example
key *	string	The SecretKey used to generate EphID	
authData *	ExposeeAuthData	AuthenticationData provided by the health institutes to verify the test results
